Fire Safety Inspections & Testing

Ensuring that your fire sprinkler system is in good working order should be a priority for all building owners and occupants. Hercules Fire Protection & Plumbing provides fire sprinkler inspections, testing and maintenance for facilities throughout Northern Ohio.

Service Department 24-Hour Emergency Service

Hercules Fire Protection & Plumbing knows when a problem occurs with a fire sprinkler system, it requires immediate attention. Our service department offers 24-Hour emergency repair service to keep your system ready to perform when needed. Our field technicians are licensed and are prepared to resolve even the most unforeseen emergencies.

Repair and Maintenance

Repair and maintenance of a fire protection system is essential to both life safety and property; it is key to the longevity of your investment. Choosing a qualified fire protection maintenance and repair contractor with proper certifications ensures that your system will function as designed. From fire pump testing to fire sprinkler piping repair you can count on our trained staff to be ready and equipped. We will help you create a schedule for maintenance to avoid unwanted emergency repairs down the line.

Required Inspections Frequently Asked Questions

How often should fire sprinkler systems be inspected and tested?

QUARTERLY & ANNUALLY - The Ohio Fire Code requires sprinkler systems to be inspected, tested and maintained in accordance with **NFPA 25**. That includes quarterly inspections of alarm devices, an annual inspection and main drain test, annual fire pump testing, and 3- and 5-year tests and internal pipe assessments. Hercules Fire Protection & Plumbing will build a schedule that covers every required interval and take care of all the proper filings with your local fire department.

How often should backflows be tested?

ANNUALLY - Backflow devices are required to be tested annually and test certificates must be filed with your water company and/or local authorities. Hercules Fire Protection & Plumbing will take care of all the proper filings & associated filing fees.

How often should fire alarms be tested?

ANNUALLY - The Ohio Fire Code requires fire alarm systems to be inspected and tested in accordance with **NFPA 72**. Most devices are tested annually, and some components require semiannual inspection. Your insurance company and local municipality may have additional requirements as well.

How often should fire extinguishers be serviced?

MONTHLY & ANNUALLY - **NFPA 10** requires a monthly visual inspection, which building staff can perform, and annual maintenance by a certified technician. Most extinguishers also need a 6-year internal examination and a hydrostatic test every 5 or 12 years, depending on type. If your extinguisher has been discharged, call us to have it recharged right away.
